# **Neighborhood Statistics**

#### **Air Pollutants**

# Latino Neighborhoods and Exposure to Particulate Matter 2.5 (PM2.5), 2015-2017

Note:  $\mu$ g/m³ = one-millionth of a gram per cubic meter of air. Note: California's state standard for PM2.5 is an annual average of 12  $\mu$ g/m³, while the federal standard is 9  $\mu$ g/m³.

There is no state or federal or state standard for Diesel PM.

#### PM2.5

**PM2.5** is produced from sources like vehicle exhaust, wildfires, and industrial activity. These fine air particles enter the lungs and bloodstream and worsen conditions like asthma and heart disease.

Latino neighborhoods had <u>higher exposure</u> to PM2.5 than NL white neighborhoods.

12 μg/m³ Latino neighborhoods 8 μg/m³

ds **NL white** neighborhoods

Annual mean concentration

#### **Diesel PM**

**Diesel emissions** from vehicles and heavy-duty equipment release harmful particulate matter. Exposure to diesel exhaust can raise blood pressure, trigger heart attacks, and worsen lung conditions.

Latino neighborhoods had <u>higher exposure</u> to diesel PM than NL white neighborhoods.

**0.27** tons/year Latino neighborhoods

# **Neighborhood Statistics (cont.)**

### **Proximity to Major Sources of Air Pollution**

Note: Exposure and proximity scores take into account the number of sites/facilities and their proximity to neighborhoods.

Higher scores = more exposure to pollutants for residents.

Cleanup sites, such as Superfunds, are polluted with materials like lead and asbestos. Examples include old and abandoned processing plants and manufacturing facilities.

#### **Exposure Score**

10

Latino neighborhoods

NL white neighborhoods

#### Hazardous waste facilities are

treatment, storage, and disposal sites. They can release toxic substances such as carcinogens, mercury, and asbestos into the air, water, and soil.

#### **Exposure Score**

0.5

**Latino** neighborhoods **NL white** neighborhoods

RMP facilities are sites where hazardous chemicals—like propane, pesticides, ammonia, and explosives—are present, posing risks to the environment and communities if released.

#### **Proximity Score**

0.1

**Latino** neighborhoods **NL white** neighborhoods

### **Vehicle Types and Traffic**

#### Lower-emission vehicles (LEVs)

use battery electric, plug-in hybrid, or hybrid technology to reduce greenhouse gas emissions.

#### % of LEVs owned

2% 5%

**Latino** neighborhoods **NL white** neighborhoods

of pollutants because they lack advanced emission-control equipment.

**Clunker vehicles** (vehicles 20

years or older) emit high levels

#### % of clunker vehicles owned

11% 13% Latino neighborhoods

NL white neighborhoods

# Vehicle kilometers per hour

**Traffic density** measures the concentration of vehicles on roads within an area. Neighborhoods

near major roadways face greater exposure to

harmful emissions released from vehicles.

994 km/hr 375 km/hr Latino neighborhoods

NL white neighborhoods

## **Vulnerable Groups**

Health

#### Age

Children and older adults are more vulnerable to air pollution and have a higher risk of developing respiratory and cardiovascular diseases. **7%** ages 0-5

Latino neighborhoods

**9%** ages 65+

**5%** ages 0-5

**26%** ages 65+

NL white neighborhoods

Air pollution worsens pre-existing health conditions like asthma and coronary heart disease, increasing emergency visits and health complications. Long-term exposure to air pollution can cause chronic illness and premature death.

## % of Adults (18+) with Pre-Existing Conditions

5% Latino **7**%

**Latino** NL white neighborhoods

Coronary Heart Disease

11% 10% Latino NL white

neighborhoods neighborhoods

Asthma

## Low Birth Weight (LBW) Babies

LBW babies are born under 5 lbs. LBW increases the risk of infant mortality, developmental delays, and chronic health conditions. Exposure to air pollution, such as PM2.5, contributes to higher rates of LBW

babies.

### **Disadvantaged Communities**

The CA Environmental Protection Agency defines disadvantaged communities based on their environmental pollution burden and population characteristics. Under Senate Bill 535, revenue from CA's Cap-and-Trade Program is partly directed toward these communities through the CA Climate Investments program to reduce pollution, enhance climate resilience, and improve health and economic well-being.
